

JASON MANN

Munich, Germany
4jasonmann@gmail.com

EDUCATION

Master of Science in Informatics

Present

Technical University of Munich (TUM), Germany
Specializing in AI, High Performance Computing, and Web Development

Bachelor of Science

Technical University of Munich (TUM), Germany
Thesis: Simultaneous Tracking & Segmentation (Carotid Plaque Analysis)

SKILLS AND INTERESTS

Programming	Python, Java, C/C++, C#, SQL, Dart
Web & Cloud	Flutter, Django, Spring Boot, Vue.js, Playwright, Azure, PostgreSQL
ML & Data Science	Generative AI, AI Agents, RAG, PyTorch, OpenCV, Scikit-Learn, Pandas, Numpy, DSP
Workflow & AI tools	n8n, Xano, Sendgrid, Bubble.io, Fonio AI, Docsbot
Languages	German (Native), English (Native), Dutch (A1), Turkish (A1)

EXPERIENCE

e-mobilio

Current

Working Student - Fullstack AI & Business Automation

- Utilized n8n as the central orchestration hub to seamlessly connect and manage microservices.
- Built scalable backend operations using Xano and deployed infrastructure on Azure.
- Developed custom AI Agents using Fonio AI, Docsbot, and RAG Databases for customer review analysis.
- Integrated enterprise tools like Sendgrid to trigger automated communications.

WWK Insurance

June 2023 - May 2024

Working Student - Test Automation Framework

- Supported the migration and introduction of Playwright for modern web testing in a Java/Spring ecosystem.
- Developed a bespoke Java application for automated document evaluation.

Leibniz Supercomputing Centre (LRZ)

BEAST Lab - HPC Performance Engineering

- Benchmarked and optimized single-node performance on next-generation architectures (Intel Icelake, AMD Rome, Marvell ThunderX2, Fujitsu A64FX).
- Code tuning using OpenMP, MPI, AVX512, and ARM SVE.

PROJECTS

KakoAI Industrial Copilot

Automated BOM Extraction & Procurement

- Developed an industrial copilot to automate critical workflows for a cable confection company.
- Automatically extracts Bill of Materials from technical drawings/PDFs using Generative AI.
- Built using DSPy and a multi-agent system to integrate with internal ERPs and Octopart API.

Gamified OpenStreetMap Tracker

Hackatum Project - Full-Stack Mobile App

- Developed a full-stack mobile application (Flutter, Django) that gamifies OSM data improvement.
- Integrated Azure Custom Vision for AI-powered verification of user-submitted road condition images.

Customer Churn Prediction

Machine Learning Project

- Rigorously preprocessed telecommunications customer data to engineer robust predictive features.
- Trained and evaluated high-performance XGBoost and Random Forest classifiers to predict customer churn.

Simultaneous Tracking & Segmentation

Bachelor Thesis

- Designed a hybrid neural network architecture (PyTorch) to segment and track carotid plaques in ultrasound sequences.
- Achieved state-of-the-art performance on par with DeepLab3+ with superior temporal consistency.
